Engineered to perform. Built to last.

HFPP - Hands Free Pin Pusher

Overview

By using the included clamp, the HFPP is attached to the track pad that is aligned with your master pin, allowing the user to swing the sledgehammer fully with confidence and safety. One mechanic can safely do the job without having to hold the sledge hammer in one hand and the punch in the other. This device is very easy to use and typically can be set up in under a minute. HFPP consists of hands free punch which is recommended for Pin Diameters from 1.41" (36mm) to 2" (50mm), the HFFP-Kit which covers smaller tracks with a pin diameter of 1.12" to 1.40" and the HFFP Clamp which is attached to the track pad to provide easy alignment of the pusher with the pin.
